# Isaac Hollow Horn Bear

Software Engineer

## SUMMARY

Founding engineer and full-stack architect with 7+ years building production SaaS, AI-powered workflows, and cloud infrastructure. Own products end to end - from Laravel/React applications and secure multi-tenant architecture to AWS provisioning, billing, observability, and deployment.

## WORK EXPERIENCE

### Founding Engineer at Minnirva

**April 2026 - Present**

As founding engineer, architected and built a five-application B2B SaaS platform spanning Scout, Focus, Lens, a self-service customer portal, and a centralized billing/provisioning control plane; delivered 215,000+ lines of production code and 1,000+ automated tests.

Designed isolated multi-tenancy with a central identity and billing hub plus dedicated EC2/MariaDB environments per tenant; implemented SSO, passkeys/TOTP, Secrets Manager credentials, least-privilege access, and cross-app data contracts.

Built Scout, an AI prospecting engine using Gemini, Claude, and OpenAI consensus scoring, Google Places discovery, contact enrichment, automated overnight searches, outreach drafting, CRM handoff, and per-call LLM cost metering.

Built Lens, a natural-language-to-SQL reporting agent with live schema introspection, layered read-only SQL guards, saved reports, execution audits, and scheduled CSV delivery across SaaS and on-prem ERP data

Engineered the AWS tenant lifecycle and Stripe billing system: payment-triggered EC2 provisioning, schemas/users/secrets, S3 backups, decommission/recommission, subscription entitlements, named seats, credits, and idempotent webhooks.

Led full-stack delivery with Laravel 13, PHP 8.5, React 19, TypeScript, Inertia, Tailwind, Pest, MariaDB, Typesense, Bash, and AWS.

### Senior Full-Stack Developer & DevOps Engineer at Interstate Advanced Materials

**February 2023 - April 2026**

Built and operated Laravel/React applications on AWS EC2, owning architecture, provisioning, CI/CD, monitoring, production support, code reviews, and developer mentorship.

Developed Focus CRM with SYSPRO/ERP sync and real-time workflows; created the OAuth2-protected Argos B2B ordering API and DocuSign-based digital credit onboarding.

Designed a D&B-backed Python credit-assessment model and real-time rules engine, reducing manual credit review time by 80%.

### Full Stack Web Developer at The Lakota Dev | Sacramento, CA

**January 2019 — Present**

Build accessible full-stack websites and applications for Native organizations and small businesses, including Native Dads Network and the Native Stories storytelling platform.

### Software Engineer at 100devs

**October 2020 - February 2023**

Delivered responsive MERN applications from client discovery through deployment in an agile team environment.
